Bactusense from Israel will give real-time identification and analysis of bacteria in

With food coming in from all over the world, it would be nice to know that what we eat is not contaminated.

Bactusense from Israel will give real-time identification and analysis of bacteria in food processing plants, water systems, hospitals and more.

What if one product could detect bacteria in food-processing plants, hospitals and municipal water supplies — inexpensively and in real time?

Thanks to Israeli nanotechnology, that product is on the horizon and has the potential to save millions of lives lost to bacterial contamination every year.

You have to admit, Aris, that it is certainly different from when we were kids. Could we ever have imagined so many of the products which have come out these days which help us in our daily lives.

I loved the sifi of Verne and Wells. We did not get star trek, but when I did see it, I enjoyed the tech.

I used to design and build things I imagined. Not well, but some good came out of my tinkering. Or, I would come up with ideas for some tool or gadget to be even better.

During the war we had to be creative and be open to new ways to get by and fix things. When things are in short supply, you find alternatives.

"There is nothing either good or bad, but thinking makes it so." ~ William Shakespeare, Hamlet

I give you a lot of credit for what you have gone through and are still optimistic about the world and people in general.

You can make the best of life or you can surrender to desperation and depression. I've done both at various times. I still have periods of giving up to pain or depression, but there is always just enough of the common sense that I keep going. A day or two of rest and surrender, then back to normal.

"There is nothing either good or bad, but thinking makes it so." ~ William Shakespeare, Hamlet
